

Shavlik Netchk[®] Configure

Government Edition

Simplify and automate configuration management and compliance auditing.

The Shavlik NetChk Configure Government Edition is the ideal solution for government agencies and global businesses to automate IT management operations and provides a simplified and streamlined path to compliance for IT organizations faced with multiple security and compliance mandates.

Shavlik NetChk Configure simplifies and automates the critical to perform tasks of managing configuration settings and compliance auditing. It enables you to keep up with changes brought by dynamic networks, meet your compliance objectives, deliver cost savings by simplifying complex network security using SCAP protocols, and reduce your risk of exposure.

Apply and enforce configuration policies.

"FASTEST TIME TO VALUE:

"We no longer have to pull operational resources to gather data for upcoming audits. Shavlik's solution has provided us with push-button audit preparation."

**DIRECTOR OF INFORMATION SECURITY, GLOBAL
E-COMMERCE SOLUTIONS PROVIDER**

Be ready for your next audit in hours, not days or weeks

- ▶ Reduce Spend - time, money and IT staff while improving the level of security and conformance with internal policies and external regulations
- ▶ Increase visibility and control over configuration changes providing measurable proof of effectiveness
- ▶ Provide proof of compliance with requirements, including verifying your antivirus signatures are current
- ▶ Centralized management frees up critical IT staff

Better leverage existing systems management platforms

- ▶ Easily access those hard to manage systems through agentless technology and close their security gaps
- ▶ Validate that policy settings, distributed through GPO or other, were actually implemented
- ▶ Clear and direct mapping of configuration settings to internal policy or regulatory frameworks

Regain control of your configurations

- ▶ Establishes a configuration baseline and then proactively enforces that policy through continuous assessment of security and configuration controls
- ▶ Manages both physical systems and virtual machines, eliminating the pain points of using multiple tools as you migrate from physical to virtual worlds
- ▶ Simplifies and automates security and IT operations to lower costs, improve speed, accuracy, productivity, and support higher scale
- ▶ Develops a sustainable configuration management program through the streamlining of management, audit, and reporting processes

Shavlik Netchk® Configure

Government Edition

Easy to configure and manage

- ▶ Get up and running in 30 minutes or less
- ▶ Industry standard interface – takes the complexity out of managing configuration settings
- ▶ Fastest direct route to policy conformance and regulatory compliance
- ▶ Operationalize security/free up IT staff

Accurate and reliable scanning technology that enforces corporate security policies

- ▶ Automated policy baseline development and enforcement
- ▶ Complements and supports GPO, validating network wide that settings were truly enforced
- ▶ Security auditing based on ISO 27002 and NIST 800-53 security controls
- ▶ One of only a few SCAP-validated products that simplifies and automates both assessment and remediation
- ▶ Straightforward and direct mapping of configuration settings to mandates and industry initiatives such as FDCC or PCI

Highly Flexible Architecture

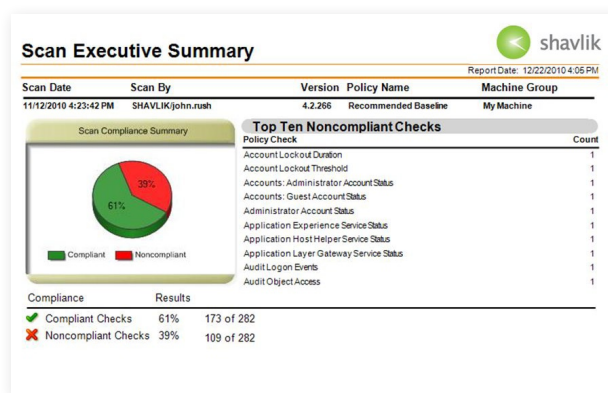

- ▶ Fully automate scanning and remediation for hands-off operation
- ▶ Manage physical machines and online virtual machines
- ▶ Agentless technology ensures seamless integration/deployment and network-wide discovery
- ▶ Fine grained control over remediation including change management

Audit Ready Reporting

- ▶ Reports are available daily, weekly, and monthly on the latest threats and vulnerabilities
- ▶ Reports directly indicate the degree of compliance with standards and policies
- ▶ Through on-going, real-time management, reports are generated to provide auditors proof of compliance

Support federal government agency mandates

- ▶ Federal Desktop Core Configuration (FDCC)- standardizing the configuration settings on Windows XP and Vista computers to strengthen Federal IT security
- ▶ United States Government Configuration Baseline (USGCB) - create security configuration baselines for Windows 7 and Internet Explorer 8 settings
- ▶ Defense Information Systems Agency – Security Technical Implementation Guide (DISA/STIGS)- requires that systems shall be configured in accordance with DoD approved security configuration guidelines

Executive reporting allows immediate understanding of real-time compliance status.

FDCC: First Real World Application for the SCAP Protocol
