**SHAVLIK TECHNOLOGIES ANNOUNCES FREE SUPPORT FOR MICROSOFT MBSA
1.2.1 LEGACY PRODUCTS IN RESPONSE TO RECENT MICROSOFT MBSA
ANNOUNCEMENT**

**-----
Shavlik Provides Simplified Solutions for Companies Relying on Microsoft's Popular
Commandline Patch Scanner**

St. Paul, MN (June 30, 2006) — In response to Microsoft's announcement, and as part of Shavlik's goal to simplify complex network security, Shavlik Technologies, LLC, has announced the availability of three new choices of its award winning software to support companies using Microsoft MBSA 1.2.1. Each of these alternatives offers current MBSA 1.2.1 customers an easy solution to patch products no longer supported by Microsoft's WSUS and SMS patching products along with support for all new Microsoft products, and patching for products beyond those from Microsoft. Shavlik is also offering commercial versions of these free products.

Choice one is Shavlik NetChk Analyzer for Microsoft, Shavlik's new, free command line scanning solution that provides support for Microsoft MBSA 1.2.1 legacy products along with all new Microsoft products. It utilizes Shavlik's industry-standard agentless technology built from its widely used HFNetChk and scans an unlimited number of hosts.

Choice two is a free and commercial version of Shavlik NetChk Analyzer, Shavlik's full featured command line patch management product that provides a seamless upgrade for Microsoft MBSA 1.2.1. It features agentless technology, Microsoft and non-Microsoft patch scanning capabilities and flexible reporting output along with high speed, accurate network scanning. Shavlik NetChk Analyzer offers support for today's most widely used platforms including Windows NT 4.0, Windows 2000, Windows XP, and Windows Server 2003. Additionally, Shavlik NetChk Analyzer scans popular Microsoft and non-Microsoft applications including Microsoft Office, SQL Server, Exchange Server, Adobe Reader, Firefox, Real Player, WinZip and many others. Shavlik is offering this product free for up to 25 seats for one year. The free version is identical to the commercial version, (other than the commercial version can scan thousands of computers).

Choice three is Shavlik NetChk Protect, the company's flagship product which is being offered free for up to 10 seats for one year. The product is also available as a full commercial version that can be used on thousands of computers. Shavlik NetChk Protect is the company's award-winning integrated patch management and spyware management solution. This product offers an intuitive graphical user interface with full remediation, network management support, high ease of use, comprehensive reporting and security analysis. The patch management component of this product received a Readers Choice Award from Redmond Magazine and Two Readers Trust Awards from SC Magazine, all in 2006.

Each of the above products can be downloaded from the Shavlik Web site at www.shavlik.com/MBSA.aspx

“We realize the importance of a command line and scripting tool that simplifies network security by enabling administrators to quickly scan their networks and determine the status of missing and installed patches,” said Mark Shavlik, president and CEO of Shavlik Technologies. “Shavlik assisted Microsoft in the development of MBSA and we are glad that we can help customers by providing patch support for legacy Microsoft products.”
